- Color Temperature Control
- MTS Stereo
- Surround Sound
- Rear A/V Inputs (2)
- S-Video Input
- ColorStream® Component Video Inputs
- Universal Remote Control

36A40

KEY SELLING BENEFITS:

Picture Performance Features

36-Inch High Contrast FST Black® Picture Tube

This dark tint tube reduces reflected light, increases contrast and delivers a wider viewing area compared to conventional direct view tube designs.

3-Line Digital Comb Filter with Vertical Contour Correction

Eliminates video noise such as dot crawl and color blooming by processing three consecutive lines of video information, and delivers sharp clear video images.

Black Level Expander

Increased black level provides richer blacks and greater contrast.

Color Temperature Control

Allows the user to set the preferred white balance for viewing in any level or type of room light from cool blue to warm red.

Invar Shadow Mask

This nickel iron alloy mask reduces thermal expansion, which results in picture distortion and discoloration compared to conventional iron masks. The result is a sharper picture with less picture distortion and discoloration even during prolonged use.

Sound Performance Features

MTS Stereo

This decoder delivers the clarity and dynamic range of stereo television broadcasts.

Surround Sound

Provides an expanded sound from sources not encoded with other surround information.

Convenience Features

Closed Captioning on Mute

Available closed captions appear automatically when television sound is muted. This allows the viewer to hear a phone call while still keeping up with the dialog on screen.

Favorite Channel

Up to nine channels may be selected and held in a separate memory that can be quickly scanned on screen.

Universal Remote Control

Operates Toshiba televisions, plus most brands of VCR and cable boxes, reducing the confusion and clutter caused by multiple remotes.

Inputs

A/V Outputs

The on screen picture and sound can be sent out to either a receiver, VCR or to another television.

ColorStream® Component Video Inputs

Specifically for connection of component video signals, this connection delivers the best picture possible from a DVD player.

Rear A/V Inputs (2 sets)

Enables connection of two composite video signals.

S-Video Input

Allows connection of components that offer a higher quality S-Video output.
